Record Content

- Bibliographic data and full text of published European patent applications and examined granted European patents and bibliographic records for PCT (Patent Cooperation Treaty) applications transferred to the EPO since 1978.
- Database records comprise all documents published for one European application number. All data corresponds to the European Patent Bulletin and is always in a current state.
- Records contain bibliographic data, titles in English, French and German, the original abstract plus the English translation of German and French abstracts and legal status information. For applications full text of detailed description and claims are given in one of EPO's official languages English, German or French; for examined granted patents the description is given in the original language, claims are available in all three languages.
- For each document the complete legal status history is maintained. All legal status events are fully searchable, including former names, addresses, and titles if they were reassigned. INPADOCDB legal status is available for display too.
- Patent and non-patent literature citations, given by the applicant within the description of a patent document as well as by the examiner in the search report, are made available for search and display.
- First page images are present for documents which were updated or entered the database after January 2006.

File Size More than 3.2 million records, more than 370,000 images (04/12)

Coverage 1978–present

Search and Display Field Codes

If multiple search terms are linked with and AND-operator, all terms are searched in the complete database record, i.e. in all publications referring to one application. For a search in a specific publication of the record, connect the search term and the patent kind code with the (L)-proximity operator, e.g.

S HOLOGRA?(S)?LASER? (L) EPA1/PK limits the search to European applications EPA1.

Fields that allow left truncation are indicated by an asterisk (*).

(1) Numeric search field that may be searched with numeric operators or ranges.

(2) Search with implied (S) proximity is available in this field.

(3) Either STN or Derwent format may be used.

(4) A thesaurus is available in this field.

(5) Only valid for IPC version 1-7.

(6) Contains INID56 and applicant-cited references.

Super Search Fields

Enter a super search field to execute a search in one or more fields that may contain the desired information. Super search fields facilitate crossfile and multifile searching. EXPAND may not be used with super search fields. Use EXPAND with the individual field codes instead.

Search Field Name	Search Code	Fields Searched	Search Examples	Display Codes
Application Number Group Short Basic Index	/APPS /SBI	/AP, /PRN /AB, /MCLM, /TI	S EP1995-104274/APPS S ANATOMIE/SBI	AI, PRAI AB, TI, MCLM

IPC Thesaurus

The classifications, validity and catchwords for the main headings and subheadings from the current (8th) edition of the WIPO International Patent Classification (IPC) manual are available. The classifications from the previous editions (1-7) are also available as separate thesauri. To EXPAND and SEARCH in the thesauri for editions 1-7, use the field code followed by the edition number, e.g. /IPC2, for the 2nd edition. Catchwords are included only in the thesauri for the 8th, 7th, 6th, and 5th editions.

IPC Thesaurus (cont'd)

Code	Content	Examples
ADVANCED (ADV)	Advanced Codes for the Core Level IPC Code	E A61K0006-02+ADVANCED/IPC
ALL	All Associated Terms (BT, SELF, NT, RT)	E C01C003-00+ALL/IPC
BRO (MAN)	Complete Class	E C01C+BRO/IPC
BT	Broader Term (BT, SELF)	E C01F001-00+BT/IPC
CORE (COR)	Core Codes for the Advanced Level IPC Code	E G08C0019-22+CORE/IPC
ED	Complete title of the SELF term and IPC manual edition	E C01F001-00+ED/IPC
HIE	Hierarchy Term (Broader and Narrower Term) (BT, SELF, NT)	E C01B003-00+HIE/IPC
INDEX	Complete title of the SELF term	E C01F001-00+INDEX/IPC
KT	Keyword Term (catchwords) (SELF, KT)	E CYANOGEN+KT/IPC
NEXT	Next Classification	E C01C001-00+NEXT5/IPC
NT	Narrower Terms (SELF, NT)	E C01C+NT/IPC
PREVn	Previous Classification (n=1,2...)	E C01C001-12+PREV10/IPC
RT (SIB)	Related Terms (SELF, RT)	E C01C003-20+RT/IPC
TI	Complete Title of the SELF Term and Broader Terms (BT, SELF)	E C01F001-00+TI/IPC

DISPLAY and PRINT Formats

Any combination of formats may be used to display or print answers. Multiple codes must be separated by spaces or commas, e.g., D L1 1-5 TI AU. The fields are displayed or printed in the order requested.

The information of the latest publication is displayed by default. To display the content for all levels of the record you can combine all display fields and formats with the qualifier .M except FA, FAM, CFAM, LS, LS2, SCAN, and TRIAL.

For displaying a particular publication of a database record, you can simply add for certain display field the kind code to the appropriate display format, e.g. ALL.A1. Fields that allow this are indicated by a number (2).

Hit-term highlighting is available for all fields. Highlighting must be ON during SEARCH to use the HIT, KWIC, and OCC formats.

Format	Content	Examples
AB (AB.M, ABS) (2)	Abstract for all Publication Levels in all Languages	D AB.M

(1) Application and patent numbers are available in STN and Derwent format. The format for DISPLAY, PRINT, SELECT, and SORT is set using the SET PATENT command. STN is the default format. Enter SET PAT DERWENT to change to the Derwent format. To reset to the STN format, enter SET PAT STN.

(2) You can combine this display field with the qualifier .PK (Patent Kind Code) to display the content for a certain publication level of a record, e.g. STD.A1

(3) Custom display only.

(4) SCAN must be specified on the command line, i.e., D SCAN or DISPLAY SCAN.

EPFULL

SELECT, ANALYZE, and SORT Fields

The SELECT command is used to create E-numbers containing terms taken from the specified field in an answer set.

The ANALYZE command is used to create an L-number containing terms taken from the specified field in an answer set.

The SORT command is used to rearrange the search results in either alphabetic or numeric order of the specified field(s).

You can combine all fields except FA with the qualifier .M to SELECT/ANALYZE the content of all publication levels.

ABEN

A motor-fastening mechanism fastens an output shaft of a motor and an input shaft of a driven member to each other. The motor-fastening mechanism has a fastening section which fastens the output shaft of the motor and the input shaft of the driven member relatively immovably, a motor-attachment member which is attached to the motor, an engaged section which is provided on either one of the motor-attachment member and the driven member, and an engaging section which is provided on the other of the motor-attachment member and the driven member and which is engaged to the engaged section such that displacement of the output shaft in a rotating direction thereof is regulated.

CLMEN

1. A motor-fastening mechanism for fastening an output shaft (4) of a motor (2) and an input shaft (13) of a driven member (11) to each other, comprising:

EPFULL

a fastening section (6) that fastens the output shaft (4) of the motor and the input shaft (13) of the driven member (11) relatively immovably,

a motor-attachment member (36) that is attached to the motor (2); characterised in that it further comprises:

an engaged section (37) and an engaging section (20) that, when engaged with each other, are suitable for absorbing misalignment that occurs on a fastened portion where the output shaft (4) and the input shaft (13) are fastened,

the engaged section (37) being provided on either one of the motor-attachment member (36) and the driven member (11),

the engaging section (20) being provided on the other of the motor-attachment member (36) and the driven member (11) and being engaged to the engaged section (37) such that rotation of the motor (2) around the rotational axis of its output shaft (4) is constrained.

ABEN

The present invention is an improved wheelbarrow with a releasable container connected to a releasable locking system for easy pouring and requiring small leverage to lift the container. The improved wheelbarrow comprising a lever mounted directly on the handle part of the wheelbarrow support frame for easily release the container during removing load process. The lever is joined to a pivotal hook which is mounted on the body of the support frame by a cable. The container includes a fixture on the lower part rear end of the container. This is to secure the container to the releasable locking system when in loading or moving position. With the grasping of the lever, a tension force is formed and thus pulled the pivotal hook backward away from the hooked position. This releases the container from its secured position and can be easily lifted for emptying purposes.

(image, imgaf001.tif, drawing)

MCLMEN

A wheelbarrow with releasable container comprising:

- a support frame;
- a pair of handle connected to said support frame of said wheelbarrow;
- a container pivotably mounted to said support frame at the lower part front end of said container;
- a fixture mounted at the rear end of said container;
- a pivotable hook mounted at the body of said handle; and

a lever disposed at the rear end of said handle, whereby said fixture, pivotable hook and said lever collectively forming a releasable locking system and said pivotable hook is responsive to the lever to engage with said fixture when said container is in attached position and disengage with said fixture when said container is in released position.
